

Airfreight

Stay informed at all times.

As an air freight forwarder, you know what a challenge it can be to make shipments, appointments, and processes insightful in order to meet your customers' demands and stay relevant. Are you wasting time manually entering data into different systems? Is it a struggle to provide your customers, customs, and airlines with up-to-date information? Or are customers frustrated because you cannot meet their needs?

With Boltrics' airfreight solution, one-time data entry is enough to process the order, initiate the shipment and send the invoice. With this you register all relevant data of the shipment. From sender, recipient and carrier to ETD and ETA. But also the size, weight, packaging, etc. Enabling you to manage the handling of airfreight from one system and staying in control of your business. From planning to invoicing.

Manage orders from inquiry to invoicing

Successful freight forwarders make the difference in terms of efficiency but there is a lot to be gained in when it comes to administration. In Boltrics' software, you can easily capture and manage orders from inquiry to invoice. One-time input of data, consistent data and real-time connections with external platforms.

Generate and send documents automatically

Have you entered the order? Then it is time to request the necessary documents to get the goods across the border. Think of an AWB, CMR, pre-bookings and flight details. But also customs documents. Do you want to inform your partners immediately? Set up automatic sending of (digital) documents without the help of Boltrics. Out of the box, our solution supports the following documents:

- AWB Stock per airline
- Checking VAT, MRN, EORI, Chamber of Commerce
- Flight details
- E-AWB, AWB, HAWB, MAWB and manifests
- Pre-bookings
- Profit share registration for import
- CMRs, Transport orders, ACN vouchers and Confirmations

Always up-to-date rates

Airfreight rates are never standard. With our software, you record complex tariff agreements in the system. This way you always have insight into the costs and revenues. In addition, always select up-to-date rates with the Cargoguide link and add them to the shipment with one click. The software takes over the rate one on one and at the same time completes the required fields. Reduce the number of administrative operations and process IATA Cass invoices simply and quickly with the IATA Hotfile connection.

Import & export from a system

Handle all air freight processes from one single system. From quotation requests to shipments, bookings and order processing. Whether it concerns import or export, the associated documents are generated from the software. Establish a link with the known airlines through, for example, the Cargonaut system.

Furthermore, manage all types of shipments effortlessly and split Master Airwaybills into separate documents (House Airwaybill).

Select flight data directly from OAG

When entering a shipment, the flight data can, of course, be entered manually. But chances are that errors creep in. Thanks to the integration with OAG, it is possible to enter this data automatically. Making it a piece of cake to select the desired flight. With the same ease, you can even add the flight details automatically to the order.

More transparency and at the same time more

convenience with Cargonaut

For Schiphol Airport, Cargonaut is the platform for the exchange of information between all parties in the logistics chain. The advantage is that information only needs to be provided once. With the Forwarding software from Boltrics, you can easily create an e-AWB via Cargonaut, which you can send quickly and easily to customs, airline and handling agent. Thanks to the automatic processing of FSU messages, the status of your shipments is clear to everyone and you can focus on exceptions. By sending all messages complete and on time, you are compliant and your shipment is "green" in the Cargonaut e-cargo receipt portal. As a bonus, inform customers automatically as soon as the flight status changes and improve customer satisfaction.

Avoid delays at the border

Share the required customs documents for import, export, and transit of goods (digitally) to customs from our software;

- Import documents
- Export documents
- T1 documents

For air freight forwarding via Amsterdam Airport Schiphol, our software is linked to Cargonaut (PGTS). Links with other customs systems for handling import and export can also be realized quickly
